

Excellence and Sustainability in Urgent Transport

PRESS RELEASE

On the occasion of the World Climate Summit (COP25) to be held from December 2 to 13 in Madrid, JETCO Express would like to make the following statement:

As an **urgent transport company** that was born with vocation of providing excellence to the CEP sector, providing it with sufficient technology and sustainability to reduce current delivery times and create a **sustainable environment**. Being fully aware that this sector has a great environmental impact, we are committed to:

- Set up an express transport (courier) logistics network in the Iberian Peninsula with a **total ecological commitment**, using sustainable land and air transport.
- Start using last generation **vehicles and light aircraft** in 2020, including those of **electric and hybrid propulsion** in the short range distances.
- Use of a **sustainable distribution and totally ecological system**, principally through **e-Bikes and e-Scooters** for "last mile" routes (main axis of our project), to employ young people, students and over 45 year-old workers, which are the most vulnerable group of people, through our initiative **Eco JetCo Employment (EJE)**.

We understand that Spain, due to its specific, climatic and geographic profile, acts as a renewable energies' catalyst in Europe, turning it into main permanent source of clean energy like the sun, wind, biofuels, etc.)

We bet for a better world and we commit to take the first step!

Influence of a sustainable Joint-Transport in the Aviation sector
